

Toronto Eye Care Launches Visioffice® from Essilor

July 15, 2011 – 9:00 AM

Toronto Eye Care Optometric Clinic (TEC) is proud to announce the addition of the Visioffice® from Essilor - a state-of-the-art dispensing system which produces a personalized optical solution for the individual visual needs of each patient.

Our experienced optical associates will utilize Visioffice® from Essilor to:

- Recommend the best lens solution for a given prescription or lifestyle
- Record and perform up to 20 critical measurements – even those needed for today's technologically advanced lenses
- Measure the real 3D position of each eye's unique eye rotation center (ERC) to create the most individualized lenses possible—eyecode™ lenses
- Produce the most technologically advanced lenses to maximize visual acuity and optimize lens performance

Visioffice® is the first and only universal measuring system that obtains every possible parameter needed for today's individualized lenses. Only the Visioffice® system measures a revolutionary new parameter — the real 3D position of the eye rotation center for each eye to maximize lens performance and expedite adaptation.

Please visit us in the Manulife Centre for a live demonstration or email us at eyeglasses@torontoeyecare.com for more information.

No system is more accurate

The most accurate measurements—to the nearest degree for angles and to 1/10 mm for distances

Incredibly easy to use

Quickest, easiest-to-use system—results displayed within 20 seconds

Frame selection made easy

The Frame Selection option makes it fun and easy for patients to choose their favorite frame.
